We would like to say that we finished satisfactory with the project called "Small Retool In-House". This project has a scope of work, in re-design components already installed in the Crankshaft line 3.5 lts V6, to make it flexible to run another model 3.9 lts V6.

We work together with Waterstone's engineers making all documentation simultaneous, and installing the components on the line, having excellent results.

We would like to consider your company in future projects.

Best Regards

Jorge Ramirez

3900 V6 Manufacturing Engineer
